Glossary

A note on valuations

The value of investments is likely to change between the start of any given day and the end of that day. The value we use on the starting day of a report will be the starting value from that day. The value we use on all other days of the report will be as at the end of that day.

Total return

Total return shows how well an account (or accounts) have done overall - including all income and returns made on units that have since been sold. It is calculated as:

The current value of the account

Minus

The amount invested into it

Plus

The amount that has been withdrawn and any income received.

If this report was generated while a transaction was not yet settled, the total return shown here may not match the valuation or money in/out columns.

Total money in & out

'**Total contribution into portfolio**' - includes transfers from other providers and single and regular contributions (but does **not** include investment income).

'**Total withdrawals & income paid out**' - includes regular and one-off withdrawals, transfers to other providers (but does **not** include ongoing fees and charges).

'**Account Information**' - shows information as at the report generation time and date.

'**Transfer between accounts**' - shows money moved between Fidelity accounts, for example bed and ISA, or a stock transfer. You will not be able to see where money has gone to or come from if the other account in question is not included in this report.

Money In

'**Regular & one-off contributions**' - this shows lump sum payments, regular savings plan, third party, employer contributions and tax relief received during the reporting period.

'**Transfer between accounts**' - shows money moved between Fidelity accounts, for example bed and ISA. These are shown only on the individual accounts.

'**Transfer from other providers**' - includes all transfers from external providers or platforms.

'**Investment Income**' - includes dividends and payments from income funds that are either re-invested or kept as cash.

Money Out

'**Regular & one-off withdrawals**' - includes pension income payments.

'**Transfer between accounts**' - shows transfers between Fidelity accounts only.

'**Transfer to other providers**' - shows external transfers for investments leaving Fidelity.

'**Income paid out**' - includes natural income payments.

'**Ongoing fees and charges**' includes any payments to advisers, DFMs and Fidelity.

Asset Allocation

A series of charts showing the stock sectors, asset classes and regions that your client is currently invested in.

For Deal Corrections:

Adjustments shown on your report are deal corrections to rectify an error. If a correction includes compensation, this will add to the total return figure.

It's rare, but sometimes the correction may result in a larger or smaller return than is the case. If you think this has happened, please let us know.

Where we've been able to identify the nature of a deal correction, this will be included in the relevant column and will not be called out separately.

Transfer between accounts

shows money moved between Fidelity accounts, for example bed and ISA, stock transfers, or crystallisations.
